

Moringa Cigarettes

Overview

Moringa, often described as the Super Food, due to its health benefits containing antioxidants, anti-inflammatory that protects the liver, kidneys, heart, and lungs. Smoking any cigarette is unhealthy for the smoker and those around him. Consuming Moringa (not smoked) can protect the smoker from unhealthy effects of smoking.

Smoking Anything is not Healthy

Lighting a tube on fire and sticking in your mouth, whether it contains tobacco,, Moringa, or other herbs, is inherently bad for one's health—even for those sharing the same airspace. Smokers are subject to tar, carbon monoxide, and many toxic combustion chemicals. Smoking Moringa or any other herb is just as likely to suffer as smoking tobacco.

Tobacco cigarette smoking is strongly linked to nicotine addiction as well as cancer, heart disease, stroke, lung disease/COPD, and weakened immune function largely due to toxic combustion products.¹

In summary: Health agencies and regulators emphasize that herbal cigarettes are “neither healthy nor safe” and that there is “no such thing as a safe smoke,” regardless of the plant used.² *However, smoking **Moringa** provides benefits that offset unhealthy result than other cigarettes.*

Using Moringa

Smoking **Moringa** cigarettes:

- Eliminate nicotine.
- Does lead to addiction.
- Eliminates other carcinogens associated with tobacco.
- If a person not willing to quit smoking, **Moringa** provides *less unhealthy* option.

Former tobacco users can use the non-smoking can use **Moringa** in the traditional forms to reverse the damage from tobacco cigarettes and promote general healthiness.

Disclaimer: This summary is based on current research and should not be considered medical advice. Patients should consult with their healthcare providers before using **Moringa** supplements, especially during cancer treatment.
