Food which has a wide range of health benefits may prevent or cure various chronic diseases are also desired. This kind of extraordinary food is also termed as super food. Scientists worldwide have identified **Moringa** a source of healthy and nutritious food properties.

Our Farm

- 100 hectare (250 acre) farm in Indonesia.
- Washing by Ozone Water before drying
- Certification by USDA
- Organic Certification

Moringa and Malnutrition:

According to The World Hunger Project, 815 million people do not have food to sustain themselves out of 7.6 billion people of the world. Moringa is a fast growing drought-resistant tree. It is widely cultivated for the diversified use of its young seed pods and green leaves as vegetables and for medicine. It is considered as a very good supplement because of its high protein value.

Moringa and Cholesterol:

According to the National Institutes of Health, Moringa leaf extract of Moringa oleifera decreased the high-fat diet-induced increases in serum, liver, and kidney cholesterol levels.

Moringa and Obesity:

Obesity constitutes a grave health problem and rises the hazard of chronic diseases such as diabetes mellitus and cardiovascular disease. Moringa holds saponins, tannins, flavonoids, glycosides and terpenoids, all of which possess medicinal belongings. The later compounds display effective anti-oxidants, anti-carcinogenic and anti-microbial potential and they can also boost the immune system.

Using Moringa in your home:

- Powder can be mixed into any sauce
- Tea leaves can replace green tea for a no caffeine hot beverage
- Powder can be substituted for 20% of the wheat in bread or pizza crust recipes
- Curry: fresh Moringa leaves, onion, tomato, curry, coconut milk, vegetables, chicken, rice
- Egg Scramble: eggs, Moringa powder, butter, salt
- Energy Balls: oats, peanut butter, honey, Moringa powder, nuts, raisins

Moringa in the food industry:

- Moringa can replace 20% of wheat flour in breads and pastas
- Moringa can be added to many sauces
- Course Shredded Dried Leaves can be substituted for tobacco for a healthy smoke

Industrial uses of Moringa:

- Seeds are used in water treatment plants to clean contaminants

Benefits of Moringa:

- Food products are very dense in vitamins for malnourished areas
- Protect and Nourish skin and hair
- Treats Edema
- Protects the Liver
